Caveduke
WINE CABINETS
The brand of the tower

Caveduke offers the largest refrigerated wine cabinets in the world. Specially designed for large spaces and large collections, the temperature is controlled using the most advanced refrigerated system, which allow large quantities of wine to be perfectly preserved at the ideal temperature. Stylish racks made of oak and fine wood that have been perfectly designed so that you can get the most out of your wine cabinet with the prestige and functionality becoming famous worldwide. We fit out wine cellars, clubs and mansions, etc. A vast range of options for your wines from the number one in storing, preserving and serving wine: **CAVEDUKE**.

Over the centuries, the most effective, indeed, the only way to age wines, sparkling wines, etc. was in natural cellars. Due to their microclimate, they made the wines mature with the most exceptional bouquet. These cellars were reserved to a minority because they needed to have a specific conditions concerning their locations and structure, as they needed to have specific conditions concerning their location and structure.

Nowadays thanks to Caveduke's refrigerated wine cabinets, this complicated process is available wherever you desire.

The air circulates constantly inside Caveduke's temperature-controlled wine cabinets, purifying and freeing it of unpleasant odours, perfectly oxygenating the wine in a natural way. One of the most important factors for preservation and ageing of wine is humidity, as it prevents the cork from drying out and shrinking. Caveduke's temperature-controlled wine cabinets keep automatically the necessary degree of humidity at the right level. Fine woods are treated with polyol and isocyanate. The mix of fine woods with polyol and isocyanate keep the perfect isolation. The innovative control system fitted by Caveduke in this wine cabinets, ensure the right temperature in our products, allowing the different types of wine (red, rosé, white or sparkling wines) to be kept at the correct temperature for ageing, preserving and serving.

This system speeds up and releases the cold held in the evaporator, thereby enhancing the sedimentation process, using the minimum electrical consumption.

Caveduke wine cabinets are designed to take advantage of the space inside, creating a good balance between quantity and convenience.

Why choose Caveduke?

- Because we make sure that there are absolutely no vibrations whatsoever, including vibrations from outside of the wine cabinets.
- Because the Caveduke temperature-control system is one of the most silent in the world.
- Because we use 5-cm thick high-density insulating material, which is the equivalent of 2m of earth.
- Because we protect your wine from harmful ultraviolet rays.
- Because it is advisable to lay down wine in a natural environment (fine wood such as oak).
- Because we provide the perfect level of hygrometry for the wine, as humidity is a vital factor in looking after corks.
- Because at Caveduke we know that wine is a living thing.

the idea of creating our company arises in a small factory	Caveduke has important points of sales and it is increasing	Our company receives a national award for its original idea	The Caveduke brand is official registered	Caveduke becomes number one in its sector in Spain
